were produces with amino- and carboxy terminal modifications which had varying PTH receptor activation properties and therefore downstream signalling. Aberrant PTH activity has been implicated in a number of disorders: osteoperosis, osteopenia, hypoparathyroidism and hypercalcaemia. In turn, hypercalcaemia is associated with hypernephroma and a variety of cancers: breast, lung and prostate carcinoma, multiple present sequence is a PTH peptide, with an Ala residue at position 1 and an Arg residue at position 19. The Ala and Arg residues both improve downstream signalling via phospholipase C (PLC) and ligand binding. The present peptide may therefore be used as a PTH receptor agonist for the treatment of the above mentioned disorders. In addition, the present sequence would be suitable for fracture repair

"A novel mutation of the signal peptide of the preproparathyroid
hormone gene associated with autosomal recessive familial isolated
hypoparathyroidism.";
J. Clin. Endocrinol. Metab. 84:3792-3796(1999).
-! FUNCTION. PTH elevates calcium level by dissolving the salts in
bone and preventing their renal excretion.
-! SUBCELIULAR LOCATION: Secreted.
-! DISEASE: Defects in PTH are a cause of familial isolated
hypoparathyroidism (FIH) (MIN:146200]. FIH exist both as autosomal
dominant and recessive forms of hypoparathyroidism.
-! SIMILARITY: Belongs to the parathyroid hormone family.

Sci. Res. Chulalongkorn Univ. 23:135-142(1998).
-!- FUNCTION: PTH elevates calcium level by dissolving the bone and preventing their renal excretion.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the parathyroid hormone family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      67.5%; Score 56; DB 1; Length 115; llarity 91.7%; Pred. "The amino acid sequence of porcine parathyroid hormone.";

"The amino acid sequence of porcine parathyroid hormone.";

Bochemiatry 13:1994-1999(1974).

-I- FUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion.

-I- SUBCELLULAR LOCATION: Secreted.

-I- SIMILARITY: Belongs to the parathyroid hormone family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sums erro;

"Solution structures of human parathyroid hormone fragments hPTH(1-34) and hPTH(1-39) and bovine parathyroid hormone fragment bPTH(1-37).";

Blochem. Biophys. Res. Commun. 267:213-220(2000).

-!- FUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion.

-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the parathyroid hormone family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SYNTHESIS OF 12-65.

- !- BUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion.

- SUBCELULAR COCATION: Secreted.
- !- SIMILARITY: Belongs to the parathyroid hormone family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NUCLECTIDE SEQUENCE.

"Molecular cloning of feline preproparathyroid hormone.";
"Submitted (OCT-2000) to the BMBL/GenBank/DDBJ databases.
-I- FUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion (By similarity).
-I- SUBCELULAR LOCATION: Secreted (By similarity).
-I- SIMILARITY: Belongs to the parathyroid hormone family.
                                                                               Felis silvestris catus (Cat).

Parent No. 6838264

GENERAL INPORMATION:

APPLICANT: Zahradnik, R.J.

ITITE OF INVENTION: Antibodies and Peptide Antigens for Producing Antibodies having a

TITLE OF INVENTION: Selective Binding Specificity to Bioactive Intact Parathyroid Hox

FILE REFERENCE: IMUNE-001A

CURRENT APPLICATION NUMBER: US/09/730,174A

CURRENT FILING DATE: 2000-12-05

NUMBER OF SEQ ID NOS: 12

SEQ ID NO II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ; FEATURE:

                                                                                                                                                                                                                                                               Sequence 5. Application US/09730174A

Batent No. 6838264

GENERAL INFORMATION:
TITLE OF INVENTION: Antibodies and Peptide Antigens for Producing Antibodies having a
TITLE OF INVENTION: Antibodies and Peptide Antigens for Producing Antibodies having a
TITLE OF INVENTION: Selective Binding Specificity to Bioactive Intact Parathyroid HC
FILE REFERENCE: IMUNE-001A
CURRENT APPLICATION NUMBER: US/09/730,174A
CURRENT FILING DATE: 2000-12-05
SEQ ID NOS: 12
LENGTH: 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      , OTHER INFORMATION: Induces Formation of Antibodies and Isolates said Antibodies 0S-09-730-1744-5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 2
US-09-421-379-5
US-09-421-379-5
i Sequence 5, Application US/09421379
i Patent No. 649562
i GENERAL INFORMATION:
i APPLICANT: Gardella, Thomas J.
APPLICANT: Kronenberg, Henry
APPLICANT: Kronenberg, Henry
APPLICANT: USPREATION:
I TITLE OF INVENTION: Bioactive Peptides and Peptide Derivatives of
ITILE OF INVENTION: Brathyroid Hormone (PTH) and Parathyroid
ITILE OF INVENTION: Hormone-Related Peptide (PTHP)
ITILE OF INVENTION HORMER: US/09/421,379
CURRENT FILING DATE: 1999-10-20
I BARLIER APPLICATION NUMBER: US, 60/105,530
I BARLIER PILING DATE: 1998-10-22
INVENTER PETING DATE: 1998-10-20

Sequence 4, Application US/10157076

Patent No. 6803213

GENERAL INFORMATION:
APPLICANT: Bringhurst, F. Richard
APPLICANT: Takabu, Hisashi
APPLICANT: Potts, John T. Jr.
TITLE OF INVENTION: Human Parathyroid Hormone Modifications, Preparation and Use
TITLE OF INVENTION: Human Parathyroid Hormone Modifications, Preparation and Use
FILE REFERENCE: 0609.4440002
CURRENT APPLICATION NUMBER: US/10/157,076
CURRENT APPLICATION NUMBER: US 09/448,867

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                          ; Search time 163 Seconds

Publication No. US20050203012A1

GENERAL INFORMATION:

APPLICANT: Bringhurst, F. Richard

APPLICANT: Takasu, Hisashi

APPLICANT: Takasu, Hisashi

APPLICANT: Takasu, Hisashi

APPLICANT: Gardella, Thomas J.

APPLICANT: Potts, John T. Jr.

TITLE OF INVENTION: Human Parathyroid Hormone Modifications, Preparation

FILE REFERENCE: 0609-4640002

CURRENT APPLICATION NUMBER: US/10/157,076

PRIOR APPLICATION NUMBER: US 60/109,938

PRIOR APPLICATION NUMBER: US 60/109,938

PRIOR FILING DATE: 1998-11-25

Sequence 9, Application US/11013759;
Sequence 9, Application US/11013759;
Publication No. US20050249747A1
GENERAL INFORMATION:
APPLICANT: Sasaki, Ken
APPLICANT: Sasaki, Ken
APPLICANT: Wang, Yan Ping
APPLICANT: Klein, Michel H.
TITLE OF INVENTION: RECOMBINANT HIGH MOLECULAR WEIGHT MAJOR OUTER MEMBRANE
TITLE OF INVENTION: RECOMBINANT HIGH MOLECULAR WEIGHT MAJOR OUTER MEMBRANE
TITLE OF INVENTION: RECOMBINANT HIGH MOLECULAR WEIGHT MAJOR OUTER MEMBRANE
TITLE OF INVENTION: BROTEIN OF MORAXELLA
TITLE OF INVENTION: 2004-12-16
CURRENT APPLICATION NUMBER: US/09/361,619
PRIOR PILING DATE: 1999-07-27
NUMBER OF SEQ ID NOS: 32
SOFTWARE: PATENTIN VEY: 2.1
SEQ ID NO 9: 32
